

DevOpsMARIO

DevOps consulting for businesses ready to level up

Bridging Development and Operations for Over 20 Years

Services

CI/CD Pipeline Design:
Faster, safer, automated deployments.

Infrastructure as Code (IaC):
Terraform, Kubernetes — codify everything.

Cloud Architecture & Migration:
Migrate and optimize across AWS, GCP, Azure.

Monitoring & Observability:
Know what's going on before your users do.

Security & Compliance:
DevSecOps without slowing you down.

DevOps Training & Mentoring:
Empower your team with the skills and mindset to operate with confidence.

Case Studies

Rebuilding Kubernetes

InFrastucture For a Web Agency

This two-year gradual migration involved moving from a custom Kubernetes solution to **AWS EKS**. I redesigned deployment strategies to **reduce deployment time from hours to minutes**, migrated PostgreSQL databases to managed Aurora or operator-based solutions, and transitioned Prometheus monitoring to Mimir and Loki. Additionally, I implemented complex egress strategies with Istio and Cilium to ensure **secure and reliable egress networking**.

Containerization

For a large FinTech Company

I led the **Dockerization** and **Kubernetes adoption process**, delivering hands-on workshops for developers. The result was a custom on-premises Kubernetes platform tailored to their legacy infrastructure, significantly improving scalability and developer autonomy.

Infrastructure For a RAG Chatbot

Designed and deployed a Kubernetes-based infrastructure for a Retrieval-Augmented Generation (**RAG**) chatbot. This system leveraged **Azure OpenAI** models for vectorization and inference, providing a scalable and cost-efficient deployment environment.

Every project is different — let's chat about yours.

DevOpsMARIO How It Works

1. Discovery Call

A quick 30-minute chat to understand your goals, tech stack, and bottlenecks.

Outcome: Clear understanding of your challenges and opportunities.

2. Custom DevOps Plan

Designing a tailored plan covering infrastructure, CI/CD, automation, and security needs.

Outcome: You receive a roadmap with timelines, tools, and scope.

3. Implementation & Iteration

Working alongside your team (or independently) to implement and refine the solution.

Outcome: Fast, stable deployments and improved developer workflows.

4. Ongoing Support / Handoff

Providing training, documentation, or ongoing support — depending on your needs.

Outcome: Self-sufficient team and long-term DevOps stability.

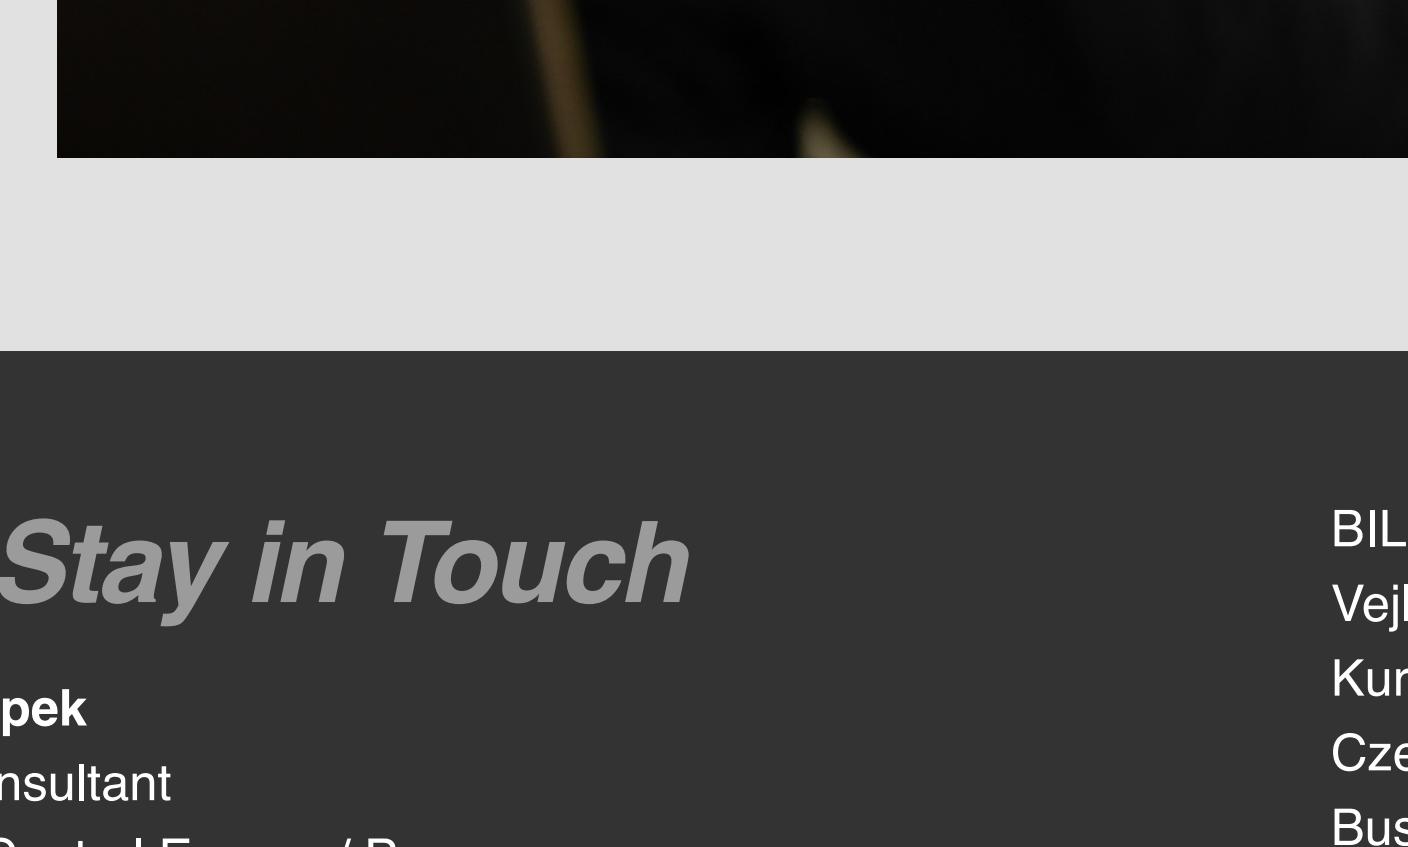

Want to know how I can help you in particular?

About Me

I'm **Mario Vejlupek** — DevOps consultant, former developer, meetup founder, and speaker.

With over 20+ years of hands-on experience, I've built systems that scale and teams that thrive. I've trained engineers in Kubernetes, mentored across time zones, and even taught kids to code with LEGO robots.

I believe in making complex systems understandable, usable, and empowering — whether you're a startup or an enterprise.
